

PRYME® P-SNAP Series Earpieces **NEW!**

PRYME's rugged P-SNAP 2-pin connector allows users to select the type of earpiece best suited to their application. Also helps prevent radio connector wear, and reduces repair costs. The special braided fiber cable is stronger and more durable than plastic coated cable, and at the same time, can be much more comfortable to wear while preventing the tangling common in PUR (polyurethane) cables.

P-SNAP is available in two different cable layouts. The 1-wire cable features an in-line PTT and microphone, while the 2-wire cable has separate PTT/microphone and earpiece cable. Once the type of cable is determined, you can choose one of five different earpiece styles.

BRAIDED FIBER

ADVANTAGES OF BRAIDED FIBER CLOTH

- Good for pulling and bending
- Soft / comfortable
- Resists tangling
- Non-reflective
- Waterproof

SNAP!
